FOCUS AREAS

- Local / On-Premise AI
- Machine Learning
- Data Analytics
- Backend Development

TECHNICAL SKILLS

PROGRAMMING

Python, Java, C, SQL

AI & DATA

Ollama, Llama, LangChain, Scikit-learn, Pandas

BACKEND & DATABASES

FastAPI, PostgreSQL, Supabase, SQLite

TOOLS

Git/GitHub, Streamlit, Render, Netlify

LANGUAGES

Turkish — Native

English — Professional

EDUCATION

Expected Jun 2028

Computer Engineering (B.S.)

Trakya University

Ali Kağan Albayrak

AI & Software Developer · Local LLMs & Data Analytics

PROFILE

Computer Engineering student and AI-focused developer who learns by building. I have built a local LLM analytics system for manufacturing data and full-stack web apps with Python and FastAPI. I enjoy turning data into practical tools and keeping AI close to where the data lives.

EXPERIENCE

E-Kart (Giesecke+Devrient)

Jul – Aug 2026

Local LLM & Software Development Intern

- Built a local LLM machine-log analysis system (Python, SQLite, Ollama/Llama 3, Streamlit) that keeps sensitive factory data on-premise.
- Moved all counting and aggregation to SQL and fed exact results to the LLM, turning raw logs into reliable anomaly reports.
- Processed 500K+ real production records; indexing and query tuning cut average query time to ~55 ms.
- Added Isolation Forest anomaly detection with plain-language root-cause explanations and a memory layer that reuses operator corrections.
- Presented a live demo to management; the system was approved for internal use and a second phase.

PROJECTS

Smart Wardrobe — Outfit Recommender

FASTAPI · POSTGRESQL · SUPABASE

A full-stack app that stores your clothes and suggests outfits by season, color and category. API deployed on Render, frontend on Netlify.

Vampir Köylü — Strategy Game

JAVA · OOP

A digital Mafia-style strategy game with role-specific logic and game-state transitions, built with OOP principles.

“Donanımın Rönesansı” — Tech Article

MEDIUM

A published article on modern hardware evolution and hardware/software interaction.

INVOLVEMENT

IoT Club — Trakya University

Board Member & Project Coordinator

Coordinated IoT projects with a five-person team and gave technical sessions on hardware-software integration.
